Data Sheet

HAWK Magnetic Level Gauge

For more information, please visit >
www.hawkmeasure.com

Product overview

The HAWK Magnetic Level Gauge (MLG) is widely applied in the monitoring and process control of liquid level and interface for many industries; such as petroleum, chemical, power, paper, metallurgy, water treatment etc.

The SPI and TBI are the standard and special magnetic level gauges of HAWK. The products are suitable for real time, precise, safe and reliable continuous measurement of process level. The design adopts a 360° magnetic ring which is hermetically sealed and incompressible. The indicator uses hermetical sealed glass tube technology to clearly indicate the level, which eliminates the common problems of glass gauges, such as vapour, condensation and liquid leakage etc.

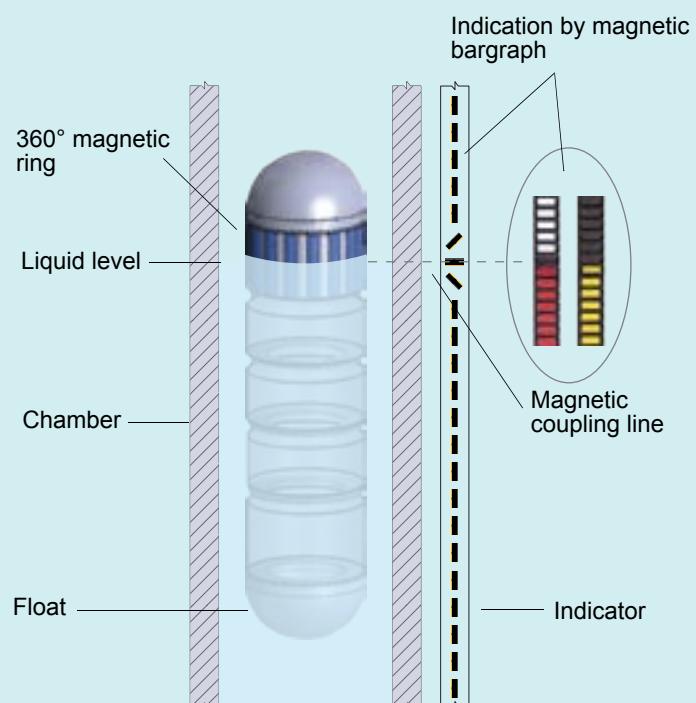

Why Choose HAWK?

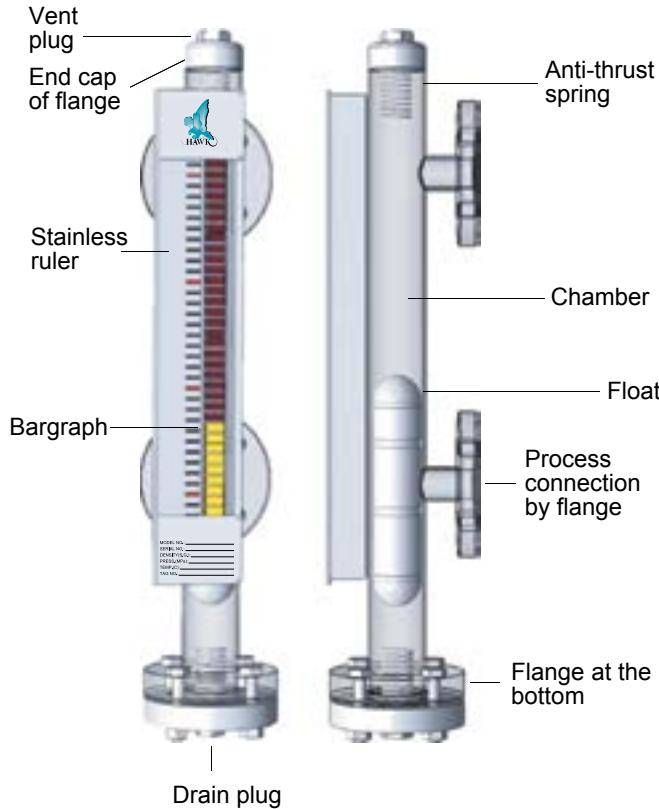

- Global support and service
- Fast quotations and deliveries
- Innovative solutions for oil & gas applications
- Support of all major communication protocols
- Commissioning services - Remotely and on-site

Principle

Based on the principle of magnetic coupling and buoyancy, the magnetic level gauge provides real-time measurement for level and interface.

HAWK's Magnetic Level Gauge (MLG) is connected to a process vessel. Within the chamber is a float containing a 360° magnetic ring. Outside of the chamber is an indicator equipped with a vacuum glass tube, which contains a bicoloured two-face magnetic bargraph. In response to the level movement, the float moves accordingly, forcing the magnetic bargraph to turn and change color. True liquid level is indicated or "read" from the corresponding point on the measuring scale.

Product structure and features

HAWK magnetic level has a simple modular design, composed a main chamber and a float.

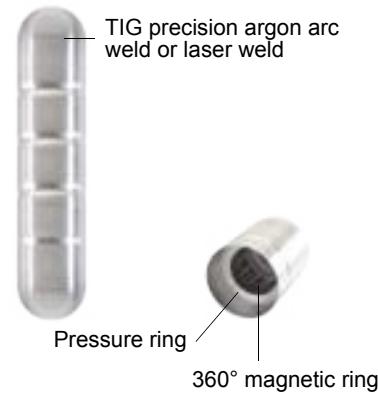

Main Chamber

- ANSI standard design or special manufacture
- Multi-forms installation and process connection
- Chamber Material: 304/304LSS, 316/316LSS, 317SS, 321SS, 347SS, Ti2, Hastelloy C-276, Zr-702, Nickel-6, 304+PTFE, CPVC and PP.

Float

The float is the key component of the level gauge, which magnetically couples to the outside indicator, liquid level switch and transmitter.

- Hermetically sealed incompressible
- 360° magnetic ring
- 316LSS, Hastelloy C-276, Zr-702, Nickel 6, Ti2, 304SS+PFA, grade V aviation titanium alloy and other materials
- Special structure and precision manufacturing technology of pulse TIG and laser weld
- Range of temperature: -320 to 1000°F (-196 to 538°C)
- Range of pressure: vacuum to 600 psig (vacuum to 42MPa)
- Suitable for harsh working conditions, such as HTHP, cryogenics and strong corrosion.

Product structure and features

Indicator

The indicator is composed of:

- 316SS or aluminium ruler
- Hermetically sealed glass tube with no contact with medium
- Magnetic bargraph is made from special high and low temperature - resistant materials
- Magnetic bargraph is mechanically interlocked to avoid random rotating
- Selectable engineering units
- Immune to oxidation, corrosion and the effects of dust

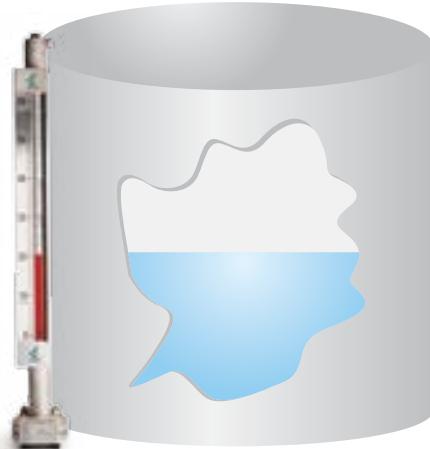

Applications

- Boiler: Steam drum liquid level
- Power generation: Auxiliary machinery liquid level (HP reheat, LP reheat, deaerator, condenser and heating network heater etc), chemical water
- Coal Chemical: Methanol, dimethyl ether, synthesis ammonia/urea, MTO, CTL, SNG
- Silicon industry: Organic silicon, polycrystalline silicon
- Petroleum and petrochemical: Oil and gas, ethylene, trimerization and etc.
- Fine Chemicals: Methane oxide, epoxy ethane, aniline, PTMEG, BDO, carbon fiber, POM, acetic acid, styrene, rubber, crude benzol refining
- Others: Metallurgy, paper-making, water treatment, biological, pharmaceutical, food and beverage etc.

Product Application

Application I:

High Temperature and High Pressure (HTHP) Application

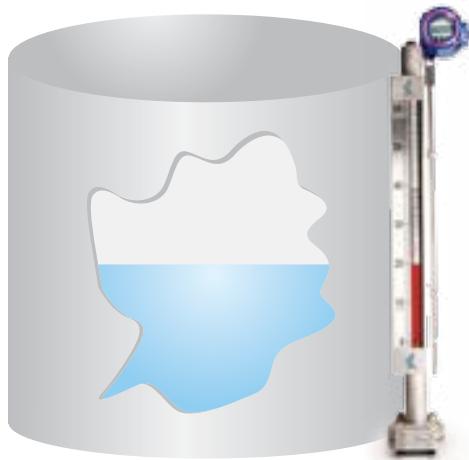

- Designed for HTHP, all components are incompressible
- Maximum process temperature: 1000°F or 538°C
- Maximum process pressure: 6000 psig or 42MPa
- Suitable for boiler steam drums, power plant auxiliary machinery, hydrogenation and other HTHP working conditions

Application II:

Low temperature / Ultra-low temperature application

- Designed for low temperature and frost prevention, all components hard and anti-compression
- Minimum process temperature: -320°F (-196°C)
- Absolutely avoids condensation, frost, freezing and etc.
- Suitable for ethylene, Rectisol and other low temperature/ ultra-low temperature working conditions

Application III:

Special Materials

- 304SS+PTFE, Hastelloy C-276, Zr 702, Ni-6 and etc.
- Wide range of temperature, pressure and corrosion resistance
- Acetic acid, acetic anhydride, chlor-alkali suitable for chemical industry and other corrosive working conditions

Application IV:

Integrated Application

- Integrated application with level transmitters/switches
- Local indication and remote signal simultaneously
- Measure multiple process interfaces
- Reduced costs of product and maintenance

Product Application

HLG - Magnetic Level Gauge

- Single-chamber
- Multiple special materials available
- Chamber size: ANSI 2"/ 2.5"/ 3"
- Maximum pressure rating: ANSI 2500LB
- Multiple options for installation and process connection

Magnetic Level Gauge Technical Specifications

Measuring Accuracy:	±0.1" or ±2.54 mm
Chamber Materials:	304/304LSS, 316/316LSS, 317LSS, 321LSS, 347LSS, 904SS, Ti2, Hastelloy C-276, Zr 702, Ni-6, 304/ 316SS lined PTFE, CPVC and PP.
Float Materials:	316/316LSS, Ti2, titanium lined PFA, titanium alloy, Hastelloy C- 276, Zr 702 and etc.
Pressure Resistance Rating:	ANSI 150~2500LB, DIN PN16~PN420
Process Connection Configuration:	Side-Mounting 1/2"~3" DN15~DN80 Top-mounting 3"~10" DN80~DN250
Process Connection Type:	Flange/Thread/Nipple
Measuring Range:	1~20ft. (0.3~6.1m), 40ft. (12m) at maximum
Temperature Range:	-320~1000°F (-196~538°C)
Pressure Range:	0~6000PSIG (Full Vacuum~42MPa)
Minimum Density:	0.3S.G./level; 0.05 S.G./interface
Indicator:	Bargraph
Protection Grade:	IP68
Indication Ruler:	Stainless or aluminium ruler, multi engineering units optional

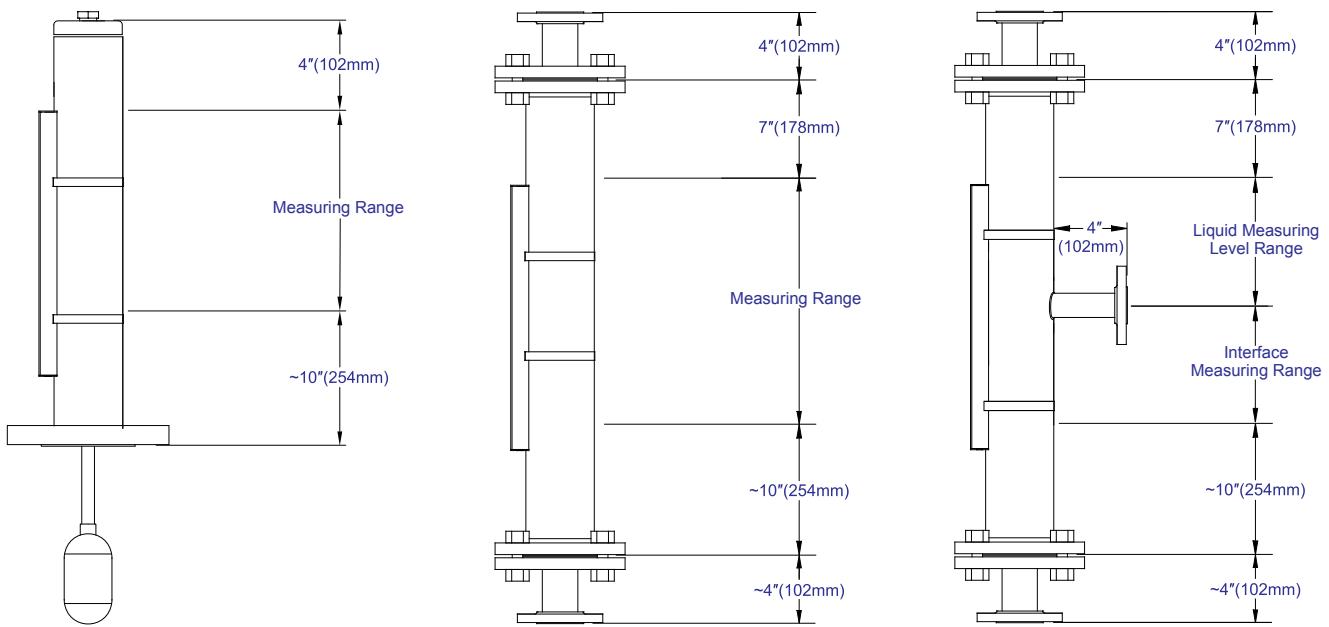

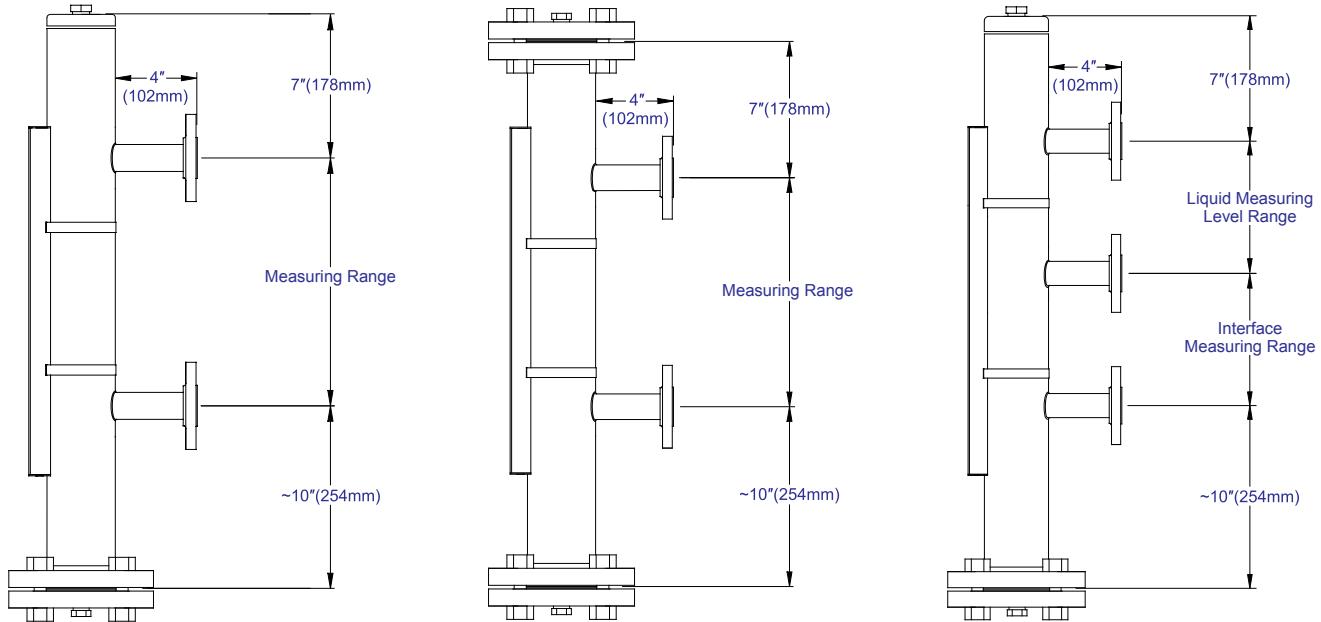

1. The pressure resistance grade of TBI is ANSI 600LB at maximum
2. The temperature resistance of magnetic bargraph type is 400°C at maximum, and magnetic shuttle 538°C

Optional

Transmitter:	Magnetostrictive (see transmitter selection)
For High Temperature:	High temperature insulation pad; high temperature insulation blanket
For Low Temperature:	Insulation level with special frost prevention extension device, frost prevention indicator
Heat Tracing:	Electric heat tracing, steam tracing tubing, steam jacket
For Valve:	Vent valve/Drain valve
